

HALIREENA RUSHDIHA MOHOMED

Bioinformatician | Crop Transcriptomics | UAV Phenotyping | Reproducible Omics Analysis
Dubai, UAE | halireenarush@gmail.com | [linkedin.com/in/halireena](https://www.linkedin.com/in/halireena) | github.com/halireena | halireena.github.io

PROFILE

MSc Bioinformatics student at the University of Birmingham (graduating November 2026) with First Class Honours in Biotechnology. Through an internship, my thesis and coursework I have built reproducible R pipelines for RNA-seq, microarray and UAV-image data, validating every result before reporting it. I have presented my research at an international conference and led pipeline validation in a team that won first place in a genomics sprint. I am looking for a graduate bioinformatics role in plant science or agritech where I can keep building my analysis and programming skills.

KEY SKILLS

Programming: R; Python; Bash; R Markdown; Git/GitHub

Analysis: R packages (limma, DESeq2, clusterProfiler, ggplot2); RNA-seq (FastQC, MultiQC, cutadapt, Bowtie2, StringTie, featureCounts, DESeq2); microarray analysis; GO and KEGG enrichment; CNV analysis; Random Forest; UAV multispectral image analysis

Platforms: BlueBEAR HPC (SLURM job arrays); Galaxy; MetaboAnalyst; GEO, ArrayExpress, Ensembl, Phytozome, NCBI, KEGG, BLAST, MEGA

Laboratory: DNA extraction, PCR, gel electrophoresis, spectrophotometry, hydroponic plant culture

EDUCATION

University of Birmingham
MSc Bioinformatics

Sep 2025 – Nov 2026 (expected)

- Awarded the University of Birmingham 125th Anniversary Scholarship for academic merit.
- Key modules: Introduction to Biology and Programming; Genomics and Next Generation Sequencing; Mathematics and Statistics; Machine Learning.

Northumbria University, at BMS School of Science, Colombo
BSc (Hons) Biotechnology, First Class Honours

Jan 2024 – Nov 2024

- Dissertation detailed under Research Projects; Dean's List Award; BMS Best Student Award 2024.

BMS School of Science, Colombo
Higher Diploma in Biotechnology, Distinction

Mar 2022 – Jan 2024

- Dissertation with the Industrial Technology Institute (ITI): extracted DNA and amplified the *rbcl* barcode gene by PCR in Sri Lankan pumpkin varieties, verified by gel electrophoresis.

WORK EXPERIENCE

Bioinformatics Intern | RIMHS, University of Sharjah

Feb 2026 – May 2026

- Analysed a public microarray dataset of potato roots under phosphate starvation (ArrayExpress E-MTAB-2990) by writing a five-stage R pipeline: quality control, limma differential expression, clustering and GO enrichment with clusterProfiler.
- Checked that the findings held under two analysis settings (285 vs 227 differentially expressed genes, 184 shared) and identified a clear phosphate-starvation response: all 11 acid phosphatases and all 6 phosphate transporters upregulated.
- Wrote up methods and limitations for the research team, including a KEGG gene-ID incompatibility, and ran a short machine-learning teaching session for fellow interns.

Medical Transcriptionist Trainee | Hemas Hospital, Sri Lanka

Oct 2024 – Dec 2024

- Transcribed 40+ dermatology and ophthalmology consultations a day into accurate clinical records with consultants, nurses and IT staff during the move to electronic health records.

Laboratory Intern | Industrial Technology Institute (ITI), Sri Lanka

Feb 2023

- Carried out DNA extraction, PCR, gel electrophoresis and spectrophotometry to standard protocols in a two-week placement; reviewed results and flagged inconsistencies; awarded Best Performance.

RESEARCH PROJECTS

MSc Thesis | Potato late blight severity detection from UAV RGB and multispectral imagery

Apr 2026 – Sep 2026

Supervisor: Dr Lindsey Compton

- Turned drone imagery of 250 potato varieties into plot-level features and trained Random Forest and other machine-learning models to detect late blight.
- Evaluated the models with cross-validation grouped by variety and permutation tests, and reframed the question with my supervisor to state what aerial imagery can and cannot detect. Presented 18 Sep 2026; abstract and paper in preparation.

BioConnect 2026 Sprint (Abiomix challenge) | Prioritising unsolved rare-disease cases for genomic re-analysis, team of 3

Jul 2026

- With two teammates, built a seven-stage pipeline that ranked 133 unsolved cases for re-analysis; I led the GitHub repository, pipeline validation and CNV analysis, and coordinated tasks and deadlines.
- First place in the Abiomix challenge; selected for the BioConnect Accelerator; poster at the 4th International UAE Rare Disease Society Congress; manuscript in preparation.

BSc Dissertation | Iron biofortification of leafy greens in hydroponic systems

Feb 2024 – Aug 2024

- Grew mukunuwenna (*Alternanthera sessilis*) and kangkung in nutrient-film and coconut-coir hydroponics at three iron levels and assayed iron, nutrient, phenolic and antioxidant content.
- Measured leaf iron by AAS (one-way ANOVA): iron rose with dose in coconut-coir mukunuwenna (to 20.3 ppm) and NFT kangkung (19.5 ppm) but not in NFT mukunuwenna. Published as an abstract and presented orally at ICIET 2024.
